

INBOUND / OUTBOUND

For inbound/outbound journey to/from chalet		Before Controls				After controls		
Hazard	Risk	Likelihood	Consequence	Rating	Controls	Likelihood	Consequence	Rating
Ski accident / collision	Injury	Possible	Moderate	Medium	Brief skiers on skiing in control. Provide appropriate instruction. Provide instruction on 'how to fall over'. Choose flatter course for ski in/ski out Assist less able skiers with their packs over trickier terrain	Unlikely	Moderate	Medium
Extreme weather	Hypothermia, getting lost	Possible	Moderate	Medium	Education, check weather, prepare for cold weather at departure point (Windy Corner or BRC). Rest and recover at sheltered points Use Langfords for sheltered rest and recover Single route so that whip party picks up any slower participants Enact "No Travel" contingency plan for some or all participants if required	Unlikely	Moderate	Medium
Inadequate clothing	Hypothermia, getting lost	Likely	Significant	High	Brief skiers on clothing. Check that adequate clothing is packed. Make sure wearing clothing appropriate to the conditions. Look for signs of hypothermia. Share clothing from packs if appropriate	Unlikely	Significant	Medium
Ice	Injury	Possible	Moderate	Medium	Take extra care in icy areas. Choose a non icy route. Assist less capable participants with packs over any tricky icy sections	Unlikely	Moderate	Medium

INBOUND / OUTBOUND

Poor navigation	Getting lost	Possible	Insignificant	Low	Actively navigate. Ensure all participants are travelling with someone familiar with route to/from chalet. Use snow pole lines. Single route only so that the whip party collects everyone. In poor visibility, reduce distance between participants	Unlikely	Insignificant	Low
Poor visibility	Getting lost	Possible	Insignificant	Low	Single navigation route for all party, keep party close together within sight of each other. Break into smaller groups and travel as a group. Use snow pole lines.	Unlikely	Insignificant	Low
Group management	Member location not known	Likely	Minor	Medium	Good group management (buddy, tail end charlie etc.) Ensure all participants are travelling with someone familiar with route to/from chalet. Use snow pole lines. Single route only so that the whip party collects everyone.	Possible	Minor	Medium
Inadequate sun protection	Sunburn / snow blindness	Likely	Minor	Medium	Group briefing. Make sure all use sun glasses/goggles, sun block, and sun hat. For longer journeys, ensure participants reapply. Share sunscreen if necessary	Possible	Minor	Medium

INBOUND / OUTBOUND

Inadequate footwear	Blisters	Likely	Minor	Medium	Group briefing. Make sure boots are adequate. Carry tape to protect from blisters. Carry spare socks. Recommend stopping to address blister issues early before too late, avoid pressure to push group too quickly Relieve participant's pack weight to assist blister management	Likely	Minor	Medium
Inadequate food intake	Exhaustion, hypothermia, fatigue, emotional issues	Possible	Minor	Low	Group briefing. Observe food consumption when stopped. Look for signs of exhaustion. Allow stops for food	Unlikely	Minor	Low
Inadequate water intake	Exhaustion, hypothermia, dehydration, fatigue	Possible	Minor	Low	Group briefing. Observe water consumption while skiing and stopped. Look for signs of exhaustion.	Unlikely	Minor	Low
Reckless behaviours	Ignoring instructions / failing to act with caution	Possible	Minor	Low	Group briefing. Use good group management. Explain risk to individual and group. Leader instructions are to be followed.	Possible	Minor	Low

INBOUND / OUTBOUND

Participant unfit	Slows group down, fatigue, emotional issues, injury	Possible	Minor	Low	PA/PL to introduce themselves to newer skiers and first timers on Friday night before departure, to assess confidence levels, provide assistance early before problem takes hold Observe while walking. Lighten load of participant. Modify plans.	Possible	Minor	Low
Allergic or anaphylactic reaction	Collapse or death	Unlikely	Moderate	Medium	Obtain medical info about all participants. No sharing of food. Ensure participants don't carry allergen. Train all leaders in appropriate first aid. Participant to carry EpiPen and leaders to know the location of the EpiPen.	Rare	Moderate	Low
Member psychologically not prepared for extreme conditions	Emotional issues, restricted group mobility	Possible	Minor	Medium	Group briefing. PA/PL to introduce themselves to newer skiers and first timers on Friday night before departure, to assess confidence levels, provide assistance early before problem takes hold Reassurance. Observe participants during activity.	Possible	Minor	Medium
Equipment failure	Restricted group mobility, discomfort	Possible	Minor	Medium	Walk to destination, send for snow shoes if required, swap to chalet shoes if possible and safe	Possible	Insignificant	Low

Risk Matrix		Consequence				
		Insignificant	Minor	Moderate	Significant	Severe
Likelihood	Almost Certain	LOW	MEDIUM	HIGH	EXTREME	EXTREME
	Likely	LOW	MEDIUM	HIGH	HIGH	EXTREME
	Possible	LOW	MEDIUM	MEDIUM	HIGH	HIGH
	Unlikely	LOW	LOW	MEDIUM	MEDIUM	HIGH
	Rare	LOW	LOW	LOW	MEDIUM	MEDIUM

Likelihood	Almost Certain	The risk, has a very high probability of occurring, or, occurring every time. Risk mitigation measures will certainly be required if the expected consequence of the risk is Significant or Severe.
	Likely	The risk, will probably occur. Without control improvement it is more likely than not that the risk will eventuate. Risk mitigation measures are likely to be required, especially for Significant and Severe risks.
	Possible	The risk may occur. There may be certain known or unknown circumstances that may cause the risk to eventuate. Again, risk mitigation will be required if the consequences of the risk are considered Significant or Severe.
	Unlikely	s does not mean the risk can be ignored. Risk mitigation should still be considered in case the risk eventuates and if the consequence
	Rare	cur. This does not mean the risk can be ignored. Risk mitigation should still be considered in especially if the consequence is cons

From other sources:

Likelihood	Almost Certain	Expected in normal circumstances (100%)
	Likely	Probably occur in most circumstances (10%). Has occurred in the last few years of organisation, or expected to occur in next few
	Possible	Might occur at some time (1%). Has occurred in the history of the organisation, or considered to have 5% chance of occurring in
	Unlikely	Could occur at some future time (0.1%). Has never occurred, or has a 1% risk of occurring in the next year.
	Rare	Only in exceptional circumstances (0.01%). Is possible but has not occurred to date in any similar organisation.

Consequence	Insignificant	No injuries. No enviro damage. < \$1k damage
	Minor	Some first aid required. Low enviro damage. < \$10k damage
	Moderate	External medical. Medium enviro damage. < \$100k damage
	Significant	Extensive injuries. High enviro damage. < \$1M damage
	Severe	Death or major injuries. Toxic enviro damage. > \$1M damage
