

For the Rope Tow 2026 version	Risk	Before Controls			Controls	After controls		
		Likelihood	Consequence	Rating		Likelihood	Consequence	Rating
Ski accident / collision	Injury	Likely	Moderate	High	Brief skiers on skiing in control (all participants will have completed ski school prior to riding the tow) Provide instruction on 'how to fall over'. Provide information on snow conditions when starting tow Encourage wearing of helmets Carrying of a Whistle Discourage skiing when conditions are icy Marking off Hazards with orange conduit	Possible	Moderate	Medium
Rope tow accident	Injury	Likely	Moderate	High	Tow Operators brief all users on proper use of tow prior to any use Tow Supervisors attend all active loading/unload station(s) The designated Tow Operator conducts a full test of the emergency stop system at the start each day of tow use The designated Tow Operator conducts a rope inspection at the start of the operating week The BCMG organises Rope Tow maintenance as required on a regular schedule Tow Supervisors supervise all users (especially new) of tow when loading/unloading Tow Operators conduct regular inspection of hip belts and nutcrackers Regular SOP review and assessment against national standards	Possible	Moderate	Medium
Extreme weather	Hypothermia, getting lost	Possible	Moderate	Medium	Return to chalet Discourage rope tow use in extreme weather Rope Tow terrain maps posted in tow hut and chalet	Unlikely	Moderate	Medium
Inadequate clothing	Hypothermia	Possible	Moderate	Medium	Brief skiers on clothing. Return to chalet if cold	Rare	Moderate	Low
Ice	Injury	Likely	Moderate	High	Discourage use of tow in icy conditions Encourage use of helmets Identifying ice is a trained skill in Winter Week Ski school	Possible	Moderate	Medium
Poor visibility	Getting lost	Possible	Moderate	Medium	Don't use tow in poor visibility Utilise the Pole/slope Lights controlled from the Tow Hut and from the Chalet for night skiing Return to chalet Ski in sight of each other Ski with buddy	Rare	Moderate	Low

For the Rope Tow 2026 version	Risk	Before Controls			Controls	After controls		
		Likelihood	Consequence	Rating		Likelihood	Consequence	Rating
Group management	Member location not known	Possible	Moderate	Medium	Use of whiteboard check in/check out Ski in sight of each other Refer to Missing Persons Guidelines When skiing the fringe terrain a minimum of 4 tow skier/snowboarders apply and the buddy system must be adhered to	Unlikely	Moderate	Medium
Inadequate sun protection	Sunburn / snow blindness	Likely	Minor	Medium	Group briefing. Make sure all use sun glasses/goggles, sun block, and sun hat.	Possible	Minor	Medium
Inadequate footwear	Blisters	Likely	Minor	Medium	Group briefing. Make sure boots are adequate. Return to chalet to address blisters	Likely	Minor	Medium
Inadequate food intake	Exhaustion, hypothermia, fatigue, emotional issues	Possible	Minor	Low	Group briefing. Return to chalet for meals and when hungry/tired	Unlikely	Minor	Low
Inadequate water intake	Exhaustion, hypothermia, dehydration, fatigue	Possible	Minor	Low	Group briefing. Return to chalet for drinks Carry water on tow or leave at loading station	Unlikely	Minor	Low
Reckless behaviours	Ignoring instructions / failing to act with caution	Likely	Moderate	High	Group briefing. Use good group management. Explain risk to individual and group. Leader instructions are to be followed. Discourage building of jumps etc Assess competency Follow the Code of Conduct Non-compliant users are discluded from Rope Tow usage and reported to the Wardens team where appropriate	Possible	Moderate	Medium
Equipment failure	Restricted group mobility, discomfort	Possible	Insignificant	Low	Return to chalet Contact the BCMG maintenance contact Automatic tow systems protection against failures installed Tow Operators briefing conducted pre-visit	Possible	Insignificant	Low
Falling branches	Injury, equipment damage	Possible	Significant	High	Identify trees likely to drop branches. Do not loiter under trees Avoid rope tow in extreme wind.	Unlikely	Significant	Medium
Obstacles	Injury and equipment damage	Almost Certain	Significant	Extreme	Skiers/snowboarders stay well clear of tows Construction of ramps is prohibited Marking Hazards Users are required to ski safely and to their Follow the Alpine Responsibility Code	Unlikely	Significant	Medium

		Consequence				
		Insignificant	Minor	Moderate	Significant	Severe
Likelihood	Almost Certain	LOW	MEDIUM	HIGH	EXTREME	EXTREME
	Likely	LOW	MEDIUM	HIGH	HIGH	EXTREME
	Possible	LOW	MEDIUM	MEDIUM	HIGH	HIGH
	Unlikely	LOW	LOW	MEDIUM	MEDIUM	HIGH
	Rare	LOW	LOW	LOW	MEDIUM	MEDIUM

Likelihood	Almost Certain	The risk, has a very high probability of occurring, or, occurring every time. Risk mitigation measures will certainly be required if the expected consequence of the risk is Significant or Severe.
	Likely	The risk, will probably occur. Without control improvement it is more likely than not that the risk will eventuate. Risk mitigation measures are likely to be required, especially for Significant and Severe risks.
	Possible	The risk may occur. There may be certain known or unknown circumstances that may cause the risk to eventuate. Again, risk mitigation will be required if the consequences of the risk are considered Significant or Severe.
	Unlikely	The risk will occur infrequently if at all. This does not mean the risk can be ignored. Risk mitigation should still be considered in case the risk eventuates and if the consequences are considered Significant or Severe.
	Rare	The risk will probably not occur. This does not mean the risk can be ignored. Risk mitigation should still be considered in especially if the consequence is considered Significant or Severe.

From other sources:

Likelihood	Almost Certain	Expected in normal circumstances (100%)
	Likely	Probably occur in most circumstances (10%). Has occurred in the last few years of organisation, or expected to occur in next few years.
	Possible	Might occur at some time (1%). Has occurred in the history of the organisation, or considered to have 5% chance of occurring in the next year.
	Unlikely	Could occur at some future time (0.1%). Has never occurred, or has a 1% risk of occurring in the next year.
	Rare	Only in exceptional circumstances (0.01%). Is possible but has not occurred to date in any similar organisation.

Consequence	Insignificant	No injuries. No enviro damage. < \$1k damage
	Minor	Some first aid required. Low enviro damage. < \$10k damage
	Moderate	External medical. Medium enviro damage. < \$100k damage
	Significant	Extensive injuries. High enviro damage. <\$1M damage
	Severe	Death or major injuries. Toxic enviro damage. > \$1M damage
