|            |                |                                                                                                                                                                                                                             |
|------------|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Likelihood | Almost Certain | The risk, has a very high probability of occurring, or, occurring every time. Risk mitigation measures will certainly be required if the expected consequence of the risk is Significant or Severe.                         |
|            | Likely         | The risk, will probably occur. Without control improvement it is more likely than not that the risk will eventuate. Risk mitigation measures are likely to be required, especially for Significant and Severe risks.        |
|            | Possible       | The risk may occur. There may be certain known or unknown circumstances that may cause the risk to eventuate. Again, risk mitigation will be required if the consequences of the risk are considered Significant or Severe. |
|            | Unlikely       | at all. This does not mean the risk can be ignored. Risk mitigation should still be considered in case the risk eventuates and if the consequences are d                                                                    |
|            | Rare           | bly not occur. This does not mean the risk can be ignored. Risk mitigation should still be considered in especially if the consequence is considered Sigr                                                                   |
